PROJECT REPORT: COFFEE SHOP SALES ANALYTICS

NAME: PRIYANSHU SAHOO

1. PROJECT OVERVIEW:

Build a dashboard to analyze sales and revenue data.

Key Features:

- Import data from Excel, CSV, or database
- Visualize KPIs like total sales, revenue trends, and top-performing products
- Use charts, filters, and slicers for interactive analysis

Expected Outcome:

Learn data visualization, KPI tracking, and business insight generation

2. Tools Used: [EXCEL, PIVOT TABLES, CHARTS]

3. EXCEL USED: Coffee Shop Sales Data

This dataset tracks 9,971 transactions from a coffee shop chain (2021–2023). It details sales across 5 cities, covering 7 product categories like coffee and desserts. With $46,374 in total revenue, the data provides granular insights into profitability, customer trends, and regional performance across 17 locations.

DASHBORD & PIVOT TABLES

Qty by Category

Row Labels	QTY SOLD
Coffee Beverages	1902
Cold Drinks	1968
Desserts	2050
Sandwiches	2068
Snacks	2082
Specialty Drinks	2034
Tea Beverages	2013
Grand Total	**14117**

Revenue by Category

Row Labels	REVENUE
Coffee Beverages	$ 6,535
Cold Drinks	$ 6,285

PROJECT OVERVIEW

1. Qty by Category

This table tracks volume. It shows how many individual items were sold in each product group.

- **Total Units: 14,117 items were sold in total.**
- **Top Seller: Sandwiches moved the most units (2,068).**
- **Lowest Seller: Coffee Beverages had the fewest units sold (1,902).**

2. Revenue by Category

This table tracks gross sales (money coming in) before any costs are taken out.

- **Total Revenue: $46,374.**
- **Highest Revenue: Desserts brought in the most money ($7,204).**
- **Insight: While Sandwiches sold more *units*, Desserts generated more *money*, suggesting Desserts have a higher average price point.**

4. Revenue by Year

This table shows the business's growth trend over a three-year period.

- **Performance: Sales are incredibly stable, staying around $15,000 per year.**
- **Peak Year: 2022 was the strongest year with $15,747 in revenue.**

5. Revenue & Profit by Month

This table compares sales vs. actual earnings (Profit) for each month.

1. **Highest Month: January had the highest revenue ($4,544) and profit ($1,590).**
2. **Lowest Month: February saw the lowest activity ($3,477 revenue).**
3. **Profitability: The profit is consistently about 35% of the revenue every month.**

5. Revenue by City

This tracks geographic performance across five major U.S. markets.

- **Top Market: Chicago is the most successful city ($11,206).**
- **Lowest Market: Seattle is the smallest market ($5,587).**
- **Mid-Tier: Los Angeles and New York are very close, both around the $10k mark.**

6. Transaction by Weekdays

This table measures customer traffic (how many people visited) rather than money.

1. **Total Transactions: 9,971 total customers served.**
2. **Busiest Day: Friday is the peak day for foot traffic (1,498 transactions).**
3. **Slowest Day: Monday is the quietest day (1,390 transactions).**

7. Profit Margin by Product

This is perhaps the most important table for the owner, showing the actual take-home pay after costs.

- **Total Profit: $16,231.**
- **Most Profitable: Desserts are the "cash cow" of the business, generating $2,522 in total profit.**
- **Lowest Profit: Cold Drinks generate the least profit ($2,200).**

Summary:

Across the three-year period (2021–2023), the business is highly stable but stagnant, showing consistent performance without significant growth or decline.

- **Financial Health: The business generated a total Revenue of $46,374 and a total Profit of $16,231.**
- **Profitability: There is a remarkably consistent 35% profit margin across all categories and months. This suggests that pricing and costs are strictly controlled.**
- **Sales Volume: A total of 14,117 items were sold through 9,971 individual transactions.**
- **Geographic Core: Over 65% of all revenue comes from just three cities: Chicago, Los Angeles, and New York.**

CONCLUSION

1. The "Star" Category: Desserts
While Sandwiches sell the highest volume (2,068 units), Desserts are your most valuable asset. They generate the highest revenue ($7,204) and the most profit ($2,522). This suggests that Desserts likely have a higher price point or better margins than your main food items.

2. Regional Disparity
There is a massive performance gap between cities. Chicago ($11,206) generates double the revenue of Seattle ($5,587). The business is heavily reliant on its top three markets, while the Seattle branch is significantly underperforming.

3. Operational Efficiency
Customer traffic is very well-balanced throughout the week. While Friday is the busiest day, even the slowest day (Monday) only sees a 7% drop in transactions. This allows for very predictable staffing and inventory needs.

4. The Stagnation Warning
The "Revenue by Year" table shows almost zero growth:

- **2021: $15,253**
- **2022: $15,747**
- **2023: $15,375**
  The business is "flatlining." While it is profitable and stable, it is not expanding. To grow, the business may need to investigate why sales in 2023 dipped back down to 2021 levels.

Recommendation: Consider running a promotion in Seattle or focusing marketing efforts on Desserts in the high-traffic months of January and May to break the current revenue plateau.
